The Rotterdam vibe. What makes Rotterdam appealing to creatives?

ABSTRACT

In this master thesis, the main objective is to find out what are important pull-factors to creative entrepreneurs in the creative business sector in Rotterdam. The result of this thesis can provide useful policy recommendations, since it has become evident that the Rotterdam municipality wants to make Rotterdam appealing in various factors, and especially change the image of the harbour city to one of a creative city.

Creativity and the creative class are important factors for a thriving economy. In the Netherlands, entrepreneurs and companies working in the creative industry are divided into three groups: arts, media and publishing and the creative business sector. These creative industries are mostly situated in cities, creative cities. This creative city can be the breeding ground for creativity. However, to become a successful creative city it is necessary to attract the creative class. You can do this with marketing and municipal pull-factors. The existing literature in this field will be used to predict what pull-factors are important for the creative class in Rotterdam. However, it was not feasible to research all Rotterdam creatives, so the sample had to be adjusted. It was chosen to research what people working in the creative business sector, in a company founded between 2000-2015 found most important in Rotterdam. The respondents were gathered from the database of the Chamber of Commerce, selected by SBI number. The survey questions are based on existing theory on pull-factors for creatives. The results of the survey show that there are a lot of entrepreneurs working in the design sector. The most common pull-factors identified by the sample were cultural diversity, authenticity and affordable rents in Rotterdam.

KEYWORDS: *Creative entrepreneurs, creative city, Rotterdam, creative industry, creative business sectors, pull-factors*

Introduction

“First class architecture” (Mala, 2014), “...one of Europe's most exhilarating cities right now” (The Lonely planet) and “Mixing urban grit with shiny new architecture, the aesthetically edgy port town boasts a booming art, design and food scene that’s well worth exploring” (Ceaser, 2017).

Just a grip of the international media looking at Rotterdam the past couple of years : Rotterdam is *booming*. But what makes a city so attractive and exhilarating? Naturally it differs per individual what makes a city interesting for them to live in since people have different objectives and preferences. Due to globalisation, cities have become more competitive and it has become necessary to constantly improve and adapt to recent developments (Lever, 1999). With this place competition, it has become a focus point for national and local governments to make a city attractive for the specific group of people or companies you want to attract. Creatives are one group that is becoming more interesting to attract, which will be explained more thoroughly in the theoretical framework. Important to make note of at this moment is that attracting creative people has become an important objective in policy making. However, what is it exactly that drives this particular group of people to move to a city?

This last question that has been thoroughly researched by various scholars, will be discussed in chapter one. However, I want to know what are the specific pull-factors in Rotterdam. The national press states that Rotterdam has become more popular as well as the international press as seen above. For example, the *Volkskrant* states that Rotterdam is the only city where more people move to than move out (Volkskrant, 2017). According to the city councillor the positioning of Rotterdam as an attractive city to live in has been a focus point for quite a while now (Volkskrant, 2017). Rotterdam is also focusing on the attracting of creatives. In 2006 the RRKC¹ states in a report that the ‘empowering the creative cluster is, next to the harbour and medical cluster, named to be a focus point in the economic policy’ (EDBR/RRKC, 2006, p.4). They propose that to achieve this goal it is important to make Rotterdam more attractive to creative talent and creative companies to live and work in. Furthermore, the creative cluster’s economic output should be higher according to the report from the RRKC.

¹ Rotterdamse Raad voor Kunst en Cultuur, translation: Rotterdam council for Arts and Culture.

To achieve step one, it is vital to attract the creatives. But what are the specific pull-factors that attract creatives in Rotterdam? This thesis researches this specific question by conducting a survey amongst creative entrepreneurs in Rotterdam that have settled here between 2000 and 2016. In chapter one we will look at the specific concepts that we discuss in this thesis. Furthermore, the emphasis will lie in why the attracting of creatives is important and what are thought to be important factors to do so. After that the thesis will focus on Rotterdam as a case study. The survey will try to comprehend the most important factors that play a role for creatives in the decision-making process to settle their company here in Rotterdam.

The outcome of this thesis can be a recommendation for the municipality of Rotterdam in the positioning of the city. What are the actual important factors, and what are factors that need more development to make and keep Rotterdam *booming*.

1. Theoretical Framework

1.1 Creativity, innovation and entrepreneurship

“Novelty and usefulness are the hallmarks of creative ideas, it is not surprising that the possible connections between creativity and entrepreneurship have been of interest for some time” (Ward, 2004, p.174).

Creativity is a difficult concept to describe since it is not ‘something’ tangible but more of a process. The basics of creativity lies in making something; the creation of something (Fisher & Williams, 2004). Yet, it is not just making something, it is more. Creativity must create something new and interesting (Boden, 1996). That is why innovation is an important part of creativity. They are closely intertwined concepts, they have many similarities, yet they are not the same:

‘Innovation springs from the creative application of knowledge. Thus, it has two essential ingredients: creativity - artistic, scientific or other - and a stock of knowledge. Knowledge and the functionalities it supplies are the essential raw materials, but it is the creative act that is the basis of an innovation’ (Yusuf, 2009, p.2).

To keep them apart it is good to keep in mind that creativity is an individual act, while innovation is a social process (Wilson & Stokes, 2005, p. 366). This is because creativity is in the mind of an individual and can occur only there, whilst innovation is the process following up on someone else’s idea. For example, the creation of the telephone was creative, whereas innovation is inventing a mobile phone as follow up of the regular phone.

Innovation is inspired by knowledge and ideas which come from creativity, and can be a basis for entrepreneurship. Entrepreneurship is, generally, about seeing the demand for something that is not there yet. So, creativity and resourcefulness can trigger entrepreneurship, which should be innovative. Entrepreneurs have the skills to create new and useful ideas for the businesses (Ward, 2004, p.173). To do this an entrepreneur must identify what is useful in the market now, he must see an opportunity and act on it. Therefore, creativity in the form of innovation and through entrepreneurship can be of importance for the economy. However, the idea that economic prosperity is a direct consequence of entrepreneurship and creativity could be too optimistic. It is hard to prove whether creativity is giving the economy a boost, or that economic growth is a result of a different factor. It is important to realize that creativity comes in all forms and from all kinds

of people, and not only from artists (Landry, 2006). That said, in this research the emphasis lies on creativity that is visible and effective and profitable. We call this the creative industries: this is where creativity, innovation and entrepreneurship come together.

1.2 The Creative industry

In the Netherlands, the amount of creative jobs grew until 2011 and thus had an influence on the local economy. In 2013 the creative industry counted 285 thousand jobs, which is 3,6 percent of the total amount of jobs in the Netherlands (Rutten & Koops, 2014, p.5). The government has chosen 9 top sectors in the Netherlands that are knowledge intensive, export-orientated, with a specific law and rules and that are possibly important in solving societal matters (CBS, 2016, p.84). One of them is the Creative Industry which indicates that it is a focus point of the government and important for the economy as a whole.

Interesting about the creative industry in the Netherlands is that it has been developing positively in comparison with other sectors. Since the economic crisis there have been a lot of cutbacks in the general costs in the economy, and consequently also in the creative sector – particularly in subsidies - however, the creative industry has been innovative in developing solutions to generate an own income which resulted in more job opportunities. There has also been a growth in the self-employed professionals, from 2008 on it has been mandatory to register at the Chamber of Commerce (Rutten & Koops, 2014).

The Creative Industry is a relatively new understanding and the definitions given are not always clear and vary from broad to narrow definitions. Interest in the creative industry started in the 80's with the 'Department of Culture, Media and Sports' (DCMS) defining it and has sparked the interest in the creative industries both in politics and in research. DCMS defines the creative industry as: 'those activities which have their origin in individual creativity, skill and talent and which have the potential for wealth and job creation through the generation and exploitation of intellectual property' (Department of Culture, Media and Sports, 2015 p. 5). Caves (2000, p.1.), however, defines the creative industry more specifically as:

'industries that supply goods and services that we broadly associate with cultural, artistic, or simply entertainment value. They include book and magazine publishing, the visual arts (painting and sculpture), the performing arts (theatre, opera, concerts, dance), sound recordings, cinema and TV films, even fashion and toys and games.' (Caves, 2001, p.1.)

In the Netherlands, the most common definition is by Manshanden and Van Bree (2010, p.3.):

'The creative industry is a specific form of economic activity that provides goods and services that are the result of individual or collective creative labour and entrepreneurship. Content and symbolism are the most important elements of these goods and services. They are acquired by consumers and business customers because they evoke a meaning. On basis of that an experience comes into existence. With that the creative industry plays an important role in the development and maintenance of lifestyles and cultural identities in the society'. (Manshanden & Van Bree, 2010, p.3)

In this research the definitions of the DCMS and Caves are used; DCMS explains what is needed for a creative industry, Caves explains more thoroughly what it encompasses.

In the Netherlands, the creative industry is divided in three sectors: the first one is arts, the second one is media and publishing, and the third is creative business services (Stam, de Jong & Marlet, 2008). The arts are the core of the creative industry with visual and performing arts. This sector is most of the time non-profit and non-commercial and dependent on subsidies. Beyond the core there is media and publishing where the firms use creativity in their work. On the outside, there are the creative business services where creativity is used in the daily tasks of the working environment. This sector does not necessarily produce creative content like an author writes a book or a painter creates a painting, yet it uses creativity and hire creative workers. Thus, the end-product is created with the help of creativity when referring to the creative business services (Stam, de Jong & Marlet, 2008). Most of the jobs in the creative sector can be found in the Arts sector with 102 thousand jobs in 2013, on the second place the creative business services with 95 thousand jobs and lastly the media sector accounts for 88 thousand jobs (Rutten & Koops, 2014, p.5). This sector contributes to the economy of the Netherlands with a production value that is 2,8 percent of the total of the Dutch economy (Monitor creatieve industrie, 2014, p.35.).

The creative business services are very innovative, which is required when working in the more commercial realm (Stam, de Jong & Marlet, 2008). In the commercial field, it is necessary for a business or entrepreneur to survive, and in order to survive you should be resourceful. From empirical research, it is shown that the creative industries in urban areas are the most innovative and after that media, publishing and creative business services are more innovative than the arts sector (Stam, de Jong & Marlet, 2008).

These sectors of the creative industry can be found on different levels, national, regional, but also local. The effect of the creative industry can also be on different levels, for example a hub in a city has an influence on the city and the city on the country. A concentration of different cultural and creative companies and entrepreneurs can be called a (creative) cluster. (Florida, 2002). Clusters are important in a city because they concentrate knowledge and information, allow integration of new technologies and they show new insights in managing (Simmie, 2004). A cluster can be a source of talented people who according to Florida (2002) empower innovation and economic growth. This is an economic advantage for companies (Florida, 2002).

1.3 The creative city

Localization of knowledge in the form of a cluster is effective for economic growth, therefore a city can be a good breeding ground for creativity. Also, Throsby (2001) states that culture can influence the economy in among other factors the form of attracting companies. According to Florida (2002) the creative class is the drive of a creative city. A creative city is a city that should identify, attract, nurture and sustain talent according to Landry (2006). If there are companies in a city it can attract creative inhabitants (Landry, 2006). The municipality has the tools to make the city creative and to keep it that way. It can do this with policies that stimulate the creatives to move to the city which will be discussed further in this chapter, and accommodate for the development of the creatives in the city. Cities can mobilize, channel and generate creativity (Florida, 2005, p.1).

1.3.1. Development of the city

The idea of a creative city is quite new and this idea of a creative city emerged with the changing of the urban life, it is used now to organize cities in a specific way (Pratt, 2009).

The city has changed a lot; cities have become more consumer based and this influences companies' and the government approach to cities. A change in urban life is for example that the private sector has more freedom in the sense that it is less influenced by the municipality and the government: the public sector. This way there is more freedom to focus on consumer needs, the private sector has in that way a different approach than the public. Furthermore, manufacturing jobs where cities used to thrive on, are outsourced; nowadays attracting high-tech companies is more under the attention, also attracting highly educated people is a point of interest, and culture can be used to do that. (Pratt, 2008;

Landry, 1995). These highly educated people are needed for companies, these companies can in turn have an influence on the economy. The individual consumer has become more important for a city; the city nowadays sees fulfilling the needs of the inhabitants as its main goal (Clark, 2002).

1.3.2. The Creative class

Creativity is a trait that not everyone possesses, the belief is that creativity is embodied in the creative class (Florida, 2002). The creative class can mostly be found in cities; many refer to Jacobs (1961) as one of the first scholars to identify the relation between creativity and the city. According to Florida (2002) the creative class consists of highly educated people that create meaningful new ideas. However, the members of the creative class are not fully homogenous, they are from different age, ethnicity, race, marital status and sexual preference (Florida, 2002). Florida has divided the creative class in two groups: the super-creative core and the creative professionals. The creative professionals work not only in the core but are more engaged on knowledge-intensive industries. They use creativity to innovate and solve problems (Florida, 2002). Besides the creative class, Florida (2002) distinguishes the other employed people in the service class, working class and people working in agriculture; the working class encompasses the jobs that do not provide a service or are in agriculture.

1.3.3. Citizens

The creative class can work in companies but are also just citizens in a city. Consumers in the form of citizens in a city have a lot of influence on the way a city is governed and equipped. They have an influence on what is important in a city and what is necessary to keep them there. Furthermore, the income of consumers has had an influence on homes, education and political environment. Thus, with more creative class the city can change on the way it is structured and governed.

Furthermore, the inhabitants of cities have a different lifestyle than they used to, consumers have become more individualistic. They do not necessarily go along with the masses, but have more individualistic preferences and tastes, which can influence several niche markets. There is more interest in leisure activities which influences the demand for public goods and places. There is also an increased interest in art and aesthetics in a city, which is something a person can focus on when there is more leisure time available. The

lifestyle of inhabitants has also changed because of the paradigm shift in the 1980's to information technologies (Landry, 2006). This shift has radically changed the way of communicating and thus the way of living. All the factors mentioned above summarize one fact: lifestyle has become more important in a city, and with that the quality of life (Clark et al., 2002).

1.4 Relevance of Creatives

Creativity sits at the basis of innovation, and innovation is central in stimulating economic growth in cities and for the economy in general (Stam, de Jong & Marlet, 2008, p.119). Since creativity comes in the form of companies and people it has become a focus to attract creatives. In this section, it will be explained more extensively in what way the creative class is important for a city.

An important reason to attract the creative class is because companies follow the people (Florida, 2002). Companies are attracted by talent and innovativeness and are consequently attracted to an area if there is a creative class present since they can have these talents and thus possible employees (Stam, de Jong & Marlet, 2008). Furthermore, companies are attracted by the creative class because the creative class can stimulate the formation of creative centres (Florida, 2002). The human capital theory² argues that for economic growth it is important to use the talents of highly-educated and productive people, instead of the more dominant idea that economic growth can be reached by reducing costs (Florida, 2003). Florida (2002) is more precise, according to him economic growth is stimulated by creative capital, which most importantly exists within the creative class.

So, creatives can give a boost to the settlement of companies in the place where they live, which is mostly in cities. Also, the creative class usually has a higher income which is good for the economy. They are more interested in luxury goods and services which can boost the supply side of the economy (Stam, de Jong & Marlet, 2008).

The effects that creatives have on the city specifically have been researched in the Netherlands by Stam, de Jong and Marlet (2008) and they found out that only the existence of the creative class in a city can be a driver of employment, rather than the creative

² “[...] the human capital theory argues that the key to regional growth lies not in reducing the costs of doing business but in endowments of highly educated and productive people” (Florida, 2003, p.6.) Studies in national growth have also shown this phenomenon.

industry itself. This means that the creative class is attracted to a city and gives a boost to the industry that settles there. Not the other way around.

Also, the change in communication asks for a creative solution and to accomplish that you need creative people. Information technologies are now ubiquitous and are ever changing. Because of this development knowledge and innovation can spread more rapidly. This asks for cities, persons and companies to adapt and go along with the changing world, creativity might be a solution (Landry, 2006).

Another reason to attract creatives is because artists and creatives can create and generate jobs by being entrepreneurial. Also, a positive factor that artists bring is that they boost cities and neighbourhoods by living there and by doing so make them more attractive (Markusen, 2013). For example, when the creative class comes to a neighbourhood where there were only lower educated people the creative class can give it a boost since they have more money to spend on average and thus can stimulate local amenities and the wider economy. It has become important to find ways to attract these creative people, the next paragraph will explain multiple pull-factors.

1.5 Ways to attract creatives

There are theories on how to attract creatives, and what factors have an influence on the settlement of people and creative people in particular.

One thing that influenced the aspects that attract people is the change in urban development. It has changed the way cities position themselves and what they consider as important, and more relevant, what citizens see as important. Nowadays, creatives are essential so the municipality city needs to make sure that the city is attractive for them. An individual sees a city from their own perspective. That perspective is formed with bottom-up direct experiences (Montgomery, 2010). So, it has become more important to please the individuals and give them good experiences.

A decisive pull-factor to attract any sort of people to a city are job-opportunities (Marlet & Van Woerden, 2005). Also, other economic qualities seem important. For example: affordable rents and diversity are appealing to creatives (Grodach et al., 2014; Van Dalm, 2005; Florida, 2002). However, as cities changed and its inhabitants, so did the factors that attract new people. Furthermore, job opportunities are a more general sort of pull-factor, there are however more specific pull-factors which will see in the next paragraphs.

1.5.1 The Three T's by Florida

As mentioned, according to Florida (2002) creatives are important to a city. Florida's theory has had a lot of critique, nevertheless the basics of his theory are still applicable to the city of today. His three "T's" theory encompasses the idea that creatives are attracted by three critical factors: Technology, talent and tolerance.

Cities are attractive if they have a low barrier to entry and an urban atmosphere that is easy-going, diverse and multicultural (Florida, 2002). For example; the tolerance factor can be verified with the gay index. With quantitative research by Florida (2002) shows that the number of gays in an area is a predictor for the concentration of high-tech industries. It is not clear how they necessarily are of influence on each other though. The question remains how to determine whether city is easy-going or diverse. Furthermore, diversity of a city can be dependent on multiple factors, moreover when a city is multicultural it does not necessarily mean that a city is tolerant.

Marlet and Van Woerden (2005) have applied the theory of Florida to cities in the Netherlands. The factor of tolerance did not appear to be a clear pull factor for the creative class. However, this research was conducted in 2005 and the tolerance was only researched by looking at the amount of subscriptions to popular gay magazines. This seems like an outdated method, since the subscriptions of magazines is not as popular as it used to be, and is definitely not the only factor for tolerance.

Another factor that can indicate tolerance is the cultural diversity of a city. According to Montgomery (2010) good cultural quality can be found in various factors. For example, the amount of cultural venues in a city, the festivals that are held in a city, the workspaces for artists, the artistic schools and some more. Furthermore, Montgomery (2010) argues that at least a part of the cultural activities should occur in the public spaces of the city, this can stimulate the manner in which the environment makes an impression on the people in the city.

Technology and talent can be looked at by the amount of universities and companies in the city, these respectively produce and attract creatives. Technology is a stimulator for innovation (Florida, 2005). Good schools attract people, and these individuals might stay in the city that they have studied in. For prospective students, the higher education schools are an important pull-factors. They provide higher education, and the talent is fostered and stimulated. This can be interesting for potential companies since they need highly educated

people. However, when there are not enough companies to work in the graduated people will move away.

When the attraction of the creative class is accomplished, they can have an influence on the social climate. For example, the fact that there is a creative class in a city influences on the acceptance of minorities since creatives are more tolerant according to Florida (2002). Furthermore, highly educated people are also attracted by the creative class thus they are more likely to move to an area where the creative class is present.

1.5.2 Cultural diversity

A tool to attract creatives can be cultural quarters and festivals, which show the livelihood, beauty, and cultural vibe of an urban area (Simmie, 2004). However, Pratt (2008) argues that culture is not an easy thing to create or to copy; culture is different in particular places and times, and is influenced by social cultural and economics. Besides this, some cities do not have culture to promote. A city that contains a lot of historical heritage has an easier task than a city like Baltimore (Pratt, 2008).

The creative class is more creative in their leisure time than others (Bille, 2010, p. 477). This could mean that it is more important for the creative class to have institutions nearby that can accommodate cultural entertainment for leisure time, like cinemas and libraries. According to Bille (2010) the creative class is in general more interested in heritage and history, which could imply that they are attracted to cities with more history and heritage, but not necessarily. Thus, creatives are attracted to the presence of cultural institutions and culture in the sense of liveliness of a city with festivals and cultural quarters.

1.5.3 Amenities

“A pure amenity is a non-produced public good such as weather quality that has no explicit price. In practice, previous empirical studies include government services such as education and public safety” (Gyourko & Tracy, 1991, p.775). So, amenities can also be government provided, or they are less controllable like for example the environment where the city is. There are also more tangible amenities like bars, restaurants and parks.

Traditional factors that usually attract inhabitants like schools and a safe environment are not adaptable on the creatives, they particularly do not like places with facilities focused on families like shopping malls, play grounds etc. (Gordach et al., 2014). Multiculturalism can stimulate diversity in amenities, for example there can be a Greek

restaurant and an Irish bar, which in turn attract creatives (Van Dalm, 2005).

Some amenities are supplied by the municipality, other amenities like leisure time activities as bars and restaurants need to have a reason to settle somewhere. Amenities can settle at a specific place when there is a landmark (Ahlfeldt & Maennig, 2010). For example, around the Euromast in Rotterdam there are restaurants and a park. Architecture can be an important indicator for the location of amenities; a bar is more likely to settle in an aesthetically attractive place where there are for the same reason more amenities. Amenities can have a big influence on the settling of creatives, a research by Wenting et al. (2004) showed that fashion designers were based at a place because of the amenities.

Amenities and job opportunities seem to be the most important pull-factors in the empirical research by Marlet and Van Woerden on Dutch cities (Marlet & Van Woerden, 2005). Young professionals and the creative class are as said less attracted by traditional pull-factors like schools and churches, they are more interested in leisure time amenities. The needs of the individuals have changed (Clark ed., 2002).

1.5.4 Aesthetics in a city

Visual quality - in other words aesthetic quality - is an important pull-factor for creatives to settle in a city. Also, Grodach et al. (2014) argue that the 'neighbourhood aesthetic' is an important factor for artists and thus for creatives. Again, Marlet and Van Woerden (2005) discovered in their research that in Dutch cities the aesthetic aspects are an important factor in attracting creatives. According to the research of Smit (2011) "opportunity-driven location behaviour" is becoming one of the key factors in the decision making of creatives (Smit, 2011, p.168). In this research by Smit (2011) it has become clear that visual aspects are important factors for location behaviour, they link opportunity with the visual quality a place has.

Creatives are attracted by authentic places with buildings that fit in and by old buildings (Florida 2002; Van Dalm, 2005; Marlet & Van Woerden, 2005). This does not necessarily mean that a city only has to have old heritage architecture. According to Van Dalm (2005) creatives also like places that are not finished yet and environments where there is still room to add something. This means that creatives like a mix between old and new buildings because according to Van Dalm (2005) this can also give innovation a boost due to the mix between different people and entrepreneurs. Jacobs (1961) argued that the mix between building types stimulates the city diversity. Jacobs sees that architecture is not

the only factor that attracts creatives, a city should be diverse in the sense that there is a lot of liveliness and variety. Scott (2011) also argues that the architecture is important: 'architectural design is at once an important sector of the new cognitive-cultural economy and an instrument of its deployment in urban space' (Scott, 2011, P. 308). Visual aspects in the sense of old and new buildings and other sorts of architecture do matter in the decision of location; this is important because aesthetics is important for the boost of creative thinking. Furthermore, for a creative company it is important that clients visit and visual aspects make that more attractive (Smit, 2011).

1.6 Policies

The factors mentioned above can be used by the municipality to attract the creative class. The municipality can accommodate these pull-factors or they can use these in marketing of the city.

1.6.1 Municipal factors

The city has changed in objectives since the industrial revolution. First the city was a place where big companies and factories settled and the workers were a big mass that slept in the city as a convenience. Nowadays the citizen has become important and cities are now more citizen based than before (Clark, 2002, p.503). The individual and his/her needs have become more important than the collective good and what's good for all the people, nowadays it's more about individual needs. This might influence the manner in which officials see and govern a city, and especially when they want to attract a certain type of individual to a city.

According to Van Buursink (1991) there are municipal factors like rent, and urban factors like amenities that have an influence on the decision-making process, thus the municipality does have an influence on settlement of the creatives. Municipal factors are the factors that are issued and executed by the government or municipality. For example, if they invest in the city as a good place for new companies. There are a few factors that can be influenced by policies of the municipality. An example of an urban factor is the availability of buildings and grounds. A municipal factor like the house price are of an influence on the presence of amenities; higher property prices mean less amenities (Polinsky & Shavell, 1975). Also, high housing price is negative for the settling of creatives, since higher rent and price makes it more difficult to live in a certain place. The government has different uses for

properties to attract new inhabitants or companies, and can adapt their policies on this. The price of properties can be subjective to policies on heritage. For example; property can be more expensive when it is near to heritage that has aesthetic appeal and historical importance. There are also heritage policies that have less influence on the prices of property around it (Ahfeld & Meannig, 2010). Furthermore, amenities have to be accessible, the national spatial accessibility refers to the distance that residents have to the closest amenities, this could also have an influence on the housing price (Hewko, 2002, p.1185). Thus, this is also a factor that the municipality should take into account. Furthermore, for bigger companies it is important that there is enough potential staff in the area. Lastly the area should be easy to access nationally and internationally, thus the infrastructure is important (Van Buursink, 1991, pp.130-131). Infrastructure is very important in a city, both soft and hard infrastructure. Hard infrastructure are the basic physical needs that are essential like roads and bridges. Soft infrastructure that is referred to now focuses on communication systems. The soft infrastructure needs to stimulate creatives and creative thinkers by making communication easy. The hard infrastructure is necessary for transportation and accessibility.

1.6.2 City marketing

The municipality can have an influence on pull-factors, as shown above. The policies can make and keep a city creative with various objectives in mind. But when this objective of a creative city is accomplished, there is also a need to get this fact to the outside world, to let people know that your city is a creative one.

A creative city is a 'cool' city which makes outsiders envious, thus it is useful to use that image to attract new inhabitants (Pratt, 2008). City marketing is the promotion of a place, of the city, with the objective to attract people to this specific place (Smyth, 1994). City marketing is aimed at a series of different, but related, objectives raising the competitive position of the city, attracting inward investment, improving its image and the well-being of its population. It is a tool used by the municipality to attract people and to keep the city in the picture. Typically, city marketing focuses on services rather than goods, so that the measurement of effectiveness may be much more problematic (Paddison, 1992, p.341). To be successful as a city in the creative industry, a city has to adapt to the world around it, and base its marketing or branding plan on that. Vanolo (2008) has named particular aspects that are used in constructing a creative brand for a creative city. A creative

brand can be used for place association; this is when a place is known for a certain aspect or quality. For example; Liverpool's most famous product is music.³ So, to attract certain individuals you can use marketing, or branding.

There are a few factors that are important for policy makers concerning the image of a city and with that attracting a certain kind of people: creatives. First, the creation of a buzz is important; people have to talk about the city and about the different scenes in the city. Secondly the attraction of variety is important: multi-ethnicity, multiculturalism and tolerance, like Florida (2002) also stated. Third, a local art scene is important to attract creatives. Also, the amenities like night clubs and restaurants are important for trendy neighbourhoods and liveliness in the city. Public spaces, parks and landmark buildings are important factors for the creation of a creative brand as well. Besides that, universities and schools are a boost for attracting young people and professionals, this is an important part of the knowledge-economy. Lastly the hosting of events by a city can be stimulating for the brand, and can be a stimulus for the livelihood in the city (Vanolo, 2008).

1.7 Pros and cons of policies in the creative city

It is important to understand that being a city with lots of creatives does not only have plus-sides. In this research the focus won't lie too much on this, however, it is important to understand that the attracting of companies with creativity has consequences, for example that the city has to adapt to the creative class (Pratt, 2008). When putting the creative class high on the agenda of the municipality gentrification can occur. Gentrification involves the process where a relatively poor urban area is being reinvested to make it more popular and attractive to the creative class (Ley, 2003). The attraction of the creative class in an urban area can increase housing prices which on the long term has the effect of the moving out of the original residents (Ponzini & Rossi, 2010).

The way gentrification is experienced has two sides: positive and negative. It also matters from which point of view you look at it, from that of the inhabitant or that of the municipality. For example, for the inhabitant gentrification can be a negative thing since the houses can get more expensive and this may even forces people to move out of their home. Yet for the municipality it can be positive because of the attraction of more wealthy people.

³ http://www.unesco.org/new/en/media-services/single-view/news/47_cities_join_the_unesco_creative_cities_network/

Gentrification is a measurement that should mix different people with each other, and there are a few arguments why this should work (Lees, 2002). The first suggests that the middle class is more in favour of public amenities and thus the middle class stimulates the settling of amenities in the neighbourhood they live in (Lees, 2002, p.2451). Secondly, there is the argument that a mixed neighbourhood can support the local economy better (idem). It is more beneficial for the economy to have a mixed neighbourhood than a very concentrated poor neighbourhood. The last argument for social mixing is that by this mixing the bridge between the groups has been made smaller which can promote social cohesion and can create economic opportunity (idem).

In Dutch cities, the social mixing is strongly stimulated by the government, they try to accomplish this partly by rebuilding and demolishing areas with houses for low income groups (Lees, 2002). However, these areas do not only attract inhabitants with a lower income, but also those with a higher income. The middle class and the 'lower' class do not mix particularly well, the only factor that is mixing are the children but the adults do not become socially acquainted (Lees 2002).

Thus, gentrification can be positive or negative. Yet, recent study by Lees (2007) question whether gentrification leads to positive outcomes or if it stimulates segregation and social polarization (Lees, 2007). Lees (2007) even goes as far as defining gentrification an 'aggressive, revanchist ideology designed to retake the inner city for the middle classes' (Lees, 2007, p.2450).

The loss of authenticity can also be a negative aspect of gentrification; this happens when the original inhabitants are being pushed out of their original neighbourhood (Ley, 2002). By creating an area in the way the middle class would like it, a lot of authentic factors will disappear and the original meaning of the area will be lost. This is negative for both the original inhabitants as for the creatives, since they prefer authentic areas. In principal social mixing is desired, but in execution it often does not work as desired.

1.8 Recent developments in Rotterdam

1.8.1 The Creative industry in Rotterdam

In Rotterdam, the creative economy and industry has been a point of interest since 2006. It is desired that the creative economy is stimulated and creates jobs and to make sure the creative sector is visible nationally and internationally (Gemeente Rotterdam, dKC, & OBR 2010; Manshanden & Van Bree, 2010). The visibility of the creative sector is mainly

important to shake the image of a working-city and trade it for the image that the municipality desires to have: a creative city.

In the Netherlands creativity is mostly to be found in the bigger cities in the West of the country (see figure 1). Rotterdam was in 2003 not even in the top 10 of cities with the most creative class, it occupied the 16th place in the ranking.

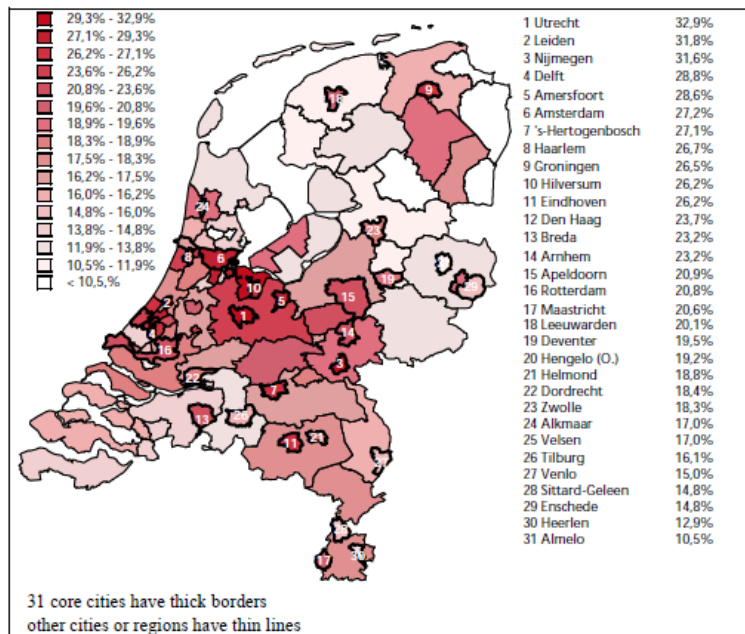

Figure 1 The geography of the Dutch creative class (Marlet & Van Woerden, 2005, p.9)

On the creative industry, the creative industry in 2013 was responsible for 2,7 percent of the total amount of jobs in Rotterdam. The creative business services have been growing from 2005 to 2013, especially in styling in design (Rutten & Koops, 2014, p.94). The arts sector and media sector shrunk in this period and a lot of jobs lapsed. However, the question remains if this trend is still going on.

1.8.2 The image of Rotterdam

According to the municipality the attracting of creative companies goes together with the image of the city: 'Rotterdam is rough, experimental, more on the edge. Rotterdam is authentic.' (Gemeente Rotterdam, dKC, & OBR, 2010, p.4). The municipality has researched the image – or the brand - of Rotterdam by doing interviews with young people of 16 to 25-year-old, the image of the city and the creative sector is positive according to these interviewees (idem). They see that there is room for creativity and a lot of opportunities, also the modernity of the city is an important point in the image (Gemeente Rotterdam, dKC, & OBR, 2010). The image is important for Rotterdam and the image seems to be going in the

right direction when gather the media coverage it got recently.⁴ Marketing is especially focused on tourism and on the image of Rotterdam as a good place for business activity, to attract more professionals (Rotterdamse Raad voor Kunst en cultuur, 2015).

To attract creatives and the creative economy the municipality can change the image of Rotterdam. For example, there lies a lot of focus in programming a lot of activities around the city where there are festivals and other activities.

However, in a research of the service Dienst Kunst & Cultuur Rotterdam (2010) the interviewees, which were young inhabitants, explained that the image of Rotterdam still needed to change. There was enough supply in arts and culture, however there needed to be more space for talent and the city was seen as 'unattractive' with too little living space (Dienst Kunst & Cultuur, 2010, p.6). The housing has become a critical issue, the housingprices are 2 percent higher than before the economic crisis (Van der Velden, 2017).

The municipality needed to become more in contact with the younger people, since they represent the future of the city. But, this could have changed over the years, since the image of Rotterdam has been a focuspoint and has been very active. It is of importance that Rotterdam tries to facilitate professional talent, like Florida (2003) also stated. There is a need for creatives but the municipality needs help and they require stimulation.

Furthermore, it needs to become easier for students to stay in Rotterdam. A lot of students left Rotterdam due to the lack of affordable livingspaces (Dienst Kunst & Cultuur, 2010). Still in 2015 Rotterdam is on the third place when looking at the height of the rent, in the years 2015-2016 the rent even went up by more than 10%. (Van Hulle, 2015, Pp. 3-4). This means that the municipality did not take sufficient measurements to accommodate students. Also, creatives need a place to work in the city. As can be seen in figure 2 Rotterdam in 2013 does not have a lot of jobs in the creative sector, which makes it difficult for creatives to stay in Rotterdam. The amount of business establishments has risen in Rotterdam, between 2000 and 2007 rose with 17 percent, which is approximately 2,3 percent per year (Epskamp & Van der Zanden, 2008). Most of the companies are in the city centre or in Delfshaven, Noord and Kralingen (Epskamp & Van der Zanden, 2008, p.19). The creative business service companies have grown between 2005 and 2013 with 8,6%, which

⁴ National papers give attention (Volkskrant) but also international attention from among others the Lonely planet (<https://www.lonelyplanet.com/the-netherlands/rotterdam>) and the New York Times (http://www.nytimes.com/interactive/2014/01/10/travel/2014-places-to-go.html?_r=0)

results in 46.042 companies in 2013 (Rutten and Koops, 2014, p. 25). Recent numbers for Rotterdam specifically are hard to find, however, when you look at the city there has been a development and for example in the west of Rotterdam there is now the Keilewerf where creative companies are gathered.

Figure 2. Percentage of jobs created by the creative industry (Monitor creatieve industrie, 2014, p.66). Translation: Employment percentage of the creative industry and ICT in 2013 in the Top 10 cities in the field of creative industry and ICT, Totally Top 10 Cities and the Netherlands.

1.8.3 Aesthetics of Rotterdam

As explained before not only the image of the city is important, but also its aesthetics are a notable aspect in attracting creatives. The aesthetic aspects of Rotterdam are quite particular: there is the modernistic side mainly due to the fact that the city was bombed and that the historical city centre had to be rebuilt. The city centre aesthetic aspects do not necessarily come from old heritage due to the said bombing (see figure 3). Thus, Rotterdam cannot only rely on the historical character of the city to attract creatives, instead the city chose to go in a different direction and not rebuilt the old buildings, but create new buildings. However, there are still historical parts like in Delfshaven which means that there is a mix between old and new buildings.

Figure 3 Top 10 historical Dutch cities (Marlet & Van Woerden, 2005, p.18)

The modernity of Rotterdam is partly based on the architecture and city-planning. The image of Rotterdam is partly formed by the characteristic buildings as the Erasmus bridge, the Euromast and the whole of *de kop van Zuid*. The modern architecture – new buildings – is a big part of the aesthetics of Rotterdam, especially since this is the way Rotterdam has rebuilt since World War II, old buildings are scarce. Furthermore, Rotterdam has internationally renowned architecture companies in the city as OMA, Neutelings Riedijk and MVRD (Gemeente Rotterdam, dKC, & OBR, 2010). The architecture is part of the aesthetic quality of the city which as seen before can also be an important pull factor of the city (Manshanden & Van Bree, 2010).

1.8.4 Diversity in Rotterdam

The Three T's of Florida (2002) are not easily to assess in Rotterdam. For example, the tolerance factor in Rotterdam is difficult to measure, however, it is commonly known that there is a lot of multiculturalism which might indicate that there is a lot of tolerance. The multicultural population causing the demand for culture to grow and to be more diverse (Rotterdamse Raad voor Kunst en cultuur, 2015). This could be a pull-factor for creatives since there is a lot of diversity that can be enjoyed. Furthermore multiculturalism can also show authenticity, some parts of the city are more diverse than others in that factor.

The schools with higher and creative are definitely present in Rotterdam. There is the Erasmus University and multiple schools for higher education. Also the creative schools are well represented with De Willem de Kooning Academie, Grafisch Lyceum, Artemis, Piet Zwart academy, Codarts and the Fotovakschool.

The gathered literature and reports showed us that Rotterdam is still in development: it wants to change its image and make the city more creative but it is not completely there yet. The creative industry is one of the key elements in shaping Rotterdam, both economically as well as the image. However, still a lot needs to be done to make the city appealing to creatives, for example the stimulating of students. One very critical point is the housing, there is not enough living space that is affordable.

2. Method

2.1. Introduction

The main goal of this thesis is to have an idea of the reasons behind the decision of entrepreneurs in the creative sector to settle in a specific place. This research was designed by looking at various articles on decision factors, and applying these to the case of Rotterdam. What is the main reason(s) for entrepreneurs in the creative business sector for working in Rotterdam? This thesis will conduct a research based on quantitative data obtained via a survey. Firstly, chapter one has explained thoroughly the concepts and explained more broadly why this research is relevant. After this, the analysis will look at the survey which used the literature from chapter one, it will test the existing theories on the case study of entrepreneurs in the creative sector in Rotterdam.

2.2. Choice of the method

The chosen method for collecting data is a questionnaire in the form of a survey. Because this research wants to look at a quite a large group of people a survey seems the best research method. With a survey, it is more likely to get a bigger sample and thus, in this case, say more about the general argumentation of entrepreneurs that chose to settle in Rotterdam. Furthermore, I would like to look at more exact factors which makes a quantitative method more clear. I am testing the already existing ideas of pull-factors that are interesting for the creative class to settle in a city (Florida, 2002; Van Dalme, 2005; Marlet & Van Woerden, 2005; Bille, 2010; Scott, 2011; Smit, 2011; Grodach, 2014; Clark, 2002; Montgomery, 2010; Jacobs, 1961). This means that the survey is based on the literature, this research functions as a case-study related to the broader research of choices for settlement in general.

The idea is that this small research could be a helpful tool for the municipality of Rotterdam by drawing some policy recommendation. As seen in the previous chapter, the creative industry is a focal point for the municipality. Furthermore, it wants a different image for the city and develops it more into a place with international prestige. Changing the city's image and creating a booming economy can possibly be achieved by attracting the creative class, at least according to various scholars and the municipality. But the creative class needs stimulation to live and to work in a specific city. The pull-factors that come out of this survey are most important for the settlement of companies in Rotterdam can be an important focus point and guideline in the policy of the municipality.

2.3 Relevance of the research

As said in the theoretical framework, Rotterdam is becoming more interested in the creative sector to stimulate a change of its image. The Rotterdamse Raad voor Kunst en Cultuur (2014) issued a recommendation for the municipality where it states that arts and culture contribute to the local economy and the attractiveness of the city. The RRKC is the official advisory board concerning arts and culture in Rotterdam. Because it is a significant factor for the image of Rotterdam it is recommended to sustain talent and make the city attractive for artists and creatives (RRKC, 2014). Naturally, the main goal of the municipality is to stimulate the economy and now the creative sector seems a useful tool to do this (TNO, 2010).

Since the creative industry, and with that the sustaining of creative talents, has become important in Rotterdam, and perhaps in other cities this research seems an urgent one. With the outcome of this research it is possible for the municipality to get an indication of the most important pull-factors. That can be a point of interest in the policies of the city.

2.4 Expectations

In designing the survey the pull-factors chosen have been derived from the literature indicated in chapter one. These factors that make a city attractive as seen in other researches are the alternatives the respondent can choose from. The research will show if the literature will be confirmed or rejected.

I suspect that the visual quality of Rotterdam is an important pull-factor, because this is part of the image of Rotterdam and because the creative class has increased interests in aesthetics. The modern architecture has been part of the identity the city for a while now, and is something that stands out. However, my hypothesis is that an important focal point is

the vibe and feel that Rotterdam has. I see this mostly in the authenticity factor, authenticity is part of the bottom-up experience that shapes the image of a city. Since this is not a 'hard' factor it means that this factor is not one that can be proved by specific factors. For example, when asking about the presence of bars and clubs you can test this by looking at the number of bars and clubs in the city, same goes for the presence of new architecture; this is not a feeling this is a fact. Based on the observations of the inhabitants I have encountered the love of Rotterdam comes from the feeling that it gives them. The analysis will decline or accept this hypothesis about the strength of authenticity. Furthermore, it is interesting to investigate which occupation is the most present in Rotterdam. Besides these hypotheses, I hope to find a correlation between a person's occupation and what he/she finds most important in a city.

2.5 Research Questions

Research Questions

- What are the most important pull-factors for creative entrepreneurs working in the creative sector to settle their company in Rotterdam?

Sub-research questions

- Which is the creative field most present in Rotterdam?
- Are most respondent's employees or self-employed – when self-employed the choice of settlement is an individual choice, whereas when working for a company you have no influence on this whatsoever.
- Have the respondents lived in Rotterdam for a long time?

2.6 Sampling Strategy

The creative industry is one that is hard to encompass, the definitions used are not ubiquitous, sometimes they change among different institutions. As mentioned, the Rotterdam Advisory board of Arts and Culture sees the creative sector as important for the city. In its sector analysis of 2015 it indicates the sectors that should be focal points in Rotterdam: Architecture, design, visual art, photography, dance, theatre, film, municipal collections, museums, heritage, literature, music, and music theatre (Rotterdamse Raad voor Kunst en Cultuur, 2015).

The most common way to distinguish the creative sector is dividing it in clusters, with

this certain types of creative jobs fall under one banner. We will look at the definition of the *Toegepast Natuurwetenschappelijk Onderzoek (TNO)*⁵. TNO is an independent organisation in the private sector, which researches societal and economic matters. The TNO explains that the creative industry encompasses the creation production and exploitation of creative products⁶.

Consequently, this research will use the most common definition as stated by the TNO and also used by the Centraal Bureau Statistiek (CBS - the Central Statistical Office)⁷ in its researches on the creative industry. This way there is consistency in what the creative industry includes. The focus of the definition lies mostly with the characteristics of the occupation, the emphasis is on what the most important function of the occupation is: creation, distribution and production (Braam, 2011).

The definition of the creative industry by the TNO divides it in three clusters: Arts and heritage, media and entertainment and creative business services. To identify the sample for the thesis we will research the sector of choice based on SBI number, which means Standard Industrial Classification. The most common SBI numbers are the ones from the CBS which are based on the *Nomenclature statistique des Activités économiques dans la Communauté Européenne* (NACE) classifications. NACE classifications are numbers given by the European Union to economic activities. NACE is an international organisation which means that there is consistency in different countries. The NACE division consists of four digits, whereas the 5th digit is a Dutch differentiation (Braam, 2011, P. 12). The *Centraal Bureau statistiek* (CBS)⁸ uses the *Standaard bedrijfsindeling* (SBI)⁹ grouping which is based on the NACE. With these numbers, you can see which cluster the specific part of the creative industry belongs to. For example, the practice of performing arts belongs to the cluster of arts and cultural heritage. The CBS states that the clusters outside the core definition of the creative industries are the knowledge-based services, creative retail and other categories. The core industries are for example museums and libraries, whereas the knowledge based services are more about design, communication, advertising and marketing. In short: the CBS uses the TNO definition to describe the creative industry and segments the whole of the creative industry by SBI

⁵ Applied scientific research

⁶ <https://www.tno.nl/nl/over-tno/missie-en-strategie/>

⁷ *Centraal Bureau van Statistiek*, translation: Central Bureau of Statistics

⁸ Central agency of statistics

⁹ Standard Industrial Classification

numbers.

The numbers that begin with 90 are arts and partly entertainment, 91 are institutions that conserve different kinds of culture like museums and libraries. The economic categories indicated with 58 refer to books publishing as well as software. The SBI codes that start with 59 relate to motion picture, sound, video and television, both the production, distribution and creative sides of this sector. Television and radio broadcasting are indicated with the number 60. The SBI number 63 is more focused on information services. Photography has its own indication with 7420. The number 93 is mostly focused on commercial entertainment like amusement parks. The number 70 is part of the cluster creative business services which encompasses Public Relations and management side. The SBI code 71 specifies architecture and engineering. The creative industry concerned with advertising is indicated with the code 73. The code 741 indicates design activities. Lastly 8320 is the number referring to the organisation of congresses and fairs.

In table 1 below the SBI numbers are stated with the corresponding specification.

Table 1 SBI-numbers

<i>Clusters</i>	<i>Specification</i>	<i>SBI number</i>	<i>Cluster</i>	<i>Specification</i>	<i>SBI-number</i>
Arts and cultural heritage	Travel information and booking offices	7990	Media and entertainment	Publishing books	5811
	Practice of Performing arts	90011		Publishing newspapers	5813
	Producing of performing arts	90012		Publishing magazines	5814
	Services for performing arts	9002		Other publishing (no software)	5819
	Artistic creation	9003		Publishing computer games	5821
	Theatres, opera houses and concert halls	90041		Software publishers (no games)	5829
	Public libraries	91011		Film production (no television films)	59111
	Art library	91012		Production of television programs	59112
	Public archives	91019		Facility services of film and television	5912

	Museums	91021		Distribution films and television productions	5913
	Art galleries and exhibition spaces	91022		Cinema's	5914
	Heritage conservation	9103		Making and publishing sound recordings	5920
	Funds (not for welfare)	94993		Radio broadcast	6010
	Supporters of culture	94994		Broadcasting	6020
Creative professional services	Public relations	7021		Press and news agency's	6321
	Architects	71111		Other information services	6329
	Advertising agency	7311		photography	74201
	Trafficking advertising space	7312		Circus and variety shows	90013
	Industrial design	741		Amusement parks	93211
	Organisation congress, fairs	8230		Carnival rides	93212

Source: own translation from Braams (2011, Pp. 15-16).

These are the core definitions, however there are also the creative retail and knowledge based services and others.

By researching the creative companies, it became clear that choosing all the clusters was not feasible for a small research. Hence, the research focuses solely on creative professional services. Later, photography was also added to the group to broaden the sample, based on its SBI number, which fits with that of the creative professional services. This cluster is one that is diverse and fluid, furthermore, these services operate mostly in the commercial realm. This is interesting since due to recent developments the subsidization for a lot of sectors in the arts has been reduced, or even scraped at all. As a creative company, it has become more urgent to be economic.

The arts and cultural heritage cluster consists of established institutions which are supported by funds a lot of times. Here creativity is shown but it is not necessarily said that the people working there are creative in their work. Furthermore, the reasons behind the settlement for museums and libraries is that they are a necessity in a city and are of

importance in education and national identity.

The media and entertainment sector also includes larger institutions which have been in Rotterdam for a while and are bound to Rotterdam by the content, like the broadcasting channel *Rotterdam Rijnmond*, which focuses on news in Rotterdam, or AD a newspaper focused on the news in Rotterdam. These are institutions which have been in the city for a long time and this makes the decision-making process of moving to Rotterdam less relevant. Furthermore, these two clusters are not made of small creative entrepreneurs, but mostly from bigger institutions (naturally, there are exceptions). Also, these institutions were already here and do not necessarily respond to specific pull-factors.

To contact the sample, the e-mail addresses for the survey were provided by filling in the SBI-number at the Chamber of Commerce, which gave a list of creative professional services. The Chamber of Commerce is the institution where companies need to subscribe, and tell what kind of company they are. These companies are arranged by SBI-number to show what kind of company it is. In the search database, you can select certain SBI-numbers that the companies should have. The focus lied on companies that started their activity and registered at the chambers of commerce between the first of January 2008 and the thirty-first of December 2015. Also from 2008 it was mandatory to register at the Chambers of commerce. The choice for starters is based on the fact that the research wants to focus on the development of Rotterdam, these companies chose Rotterdam recently, which makes their reason for settling interesting. These starters have not been here that long which means that the pull-factors could be the reason for settlement, furthermore, as said in chapter 1 the focus on creative companies has been a focus point from the municipality from the last couple of years and a recent development.

Picking the sample at the chamber of commerce means that the focus will lie on economically active companies, and companies with full and part-time employees that are based in the municipality of Rotterdam

2.6 Data collection

The survey was sent out using the program MailChimp. The survey was sent out to 231 potential respondents the first time. 55.1 % opened the e-mail, however, only 20 people filled out the survey. The mail was sent another time as a reminder to the same e-mail-addresses. This time the survey was filled by 12 people getting a total of 32 respondents.

However, this was not enough so the sample was broadened and photography was added. As the number of respondents was still not satisfactory, the sample was broadened by looking at the same companies (i.e. same SBI numbers - including photographers) for a longer period. The process was repeated, looking at companies in the period from 2000 to 2008. Here 394 registered companies were given; with in total 246 e-mail addresses. So in total taking the period 2000-2015, 477 e-mails were sent out. Because of the low rate of response, I decided to try the direct channel of WORM Rotterdam, and sent an email to the people that visited the event of the Archined price and Rotterdam late night¹⁰. According to a research from another intern at WORM, these people work mostly in the cultural sector. With Stager (an online program where all the ticket-buyers are registered) you can get the e-mail addresses by clicking on specific events that a person has visited. There are 218 e-mail addresses to send the survey to via Stager. The e-mail that was sent to them explicitly mentioning to only fill in the survey when they worked in the creative business services – explaining which these are and indicating it had to be in the specific time-period.

In total the broadened survey and the contacts from WORM resulted in 695 contacts, with 112 respondents which is 16,1% response rate.

2.7 Validity and reliability

This research focuses on the pull-factors described in the literature and wants to assess if these are applicable in Rotterdam as well. However, there are possibilities that the answers are not accurate. First, it is possible that there is no clear 'winning' reason for settlement in the survey, but every factor contributed to the decision. However, it is still possible then to see which factors had an influence, even if there is not one that stands out. Secondly, because of the choice of a quantitative research it is possible that there are factors not included in the survey, which would have been noticed when conducting a qualitative research. However, with the option 'other' in the survey there is still a possibility to add new factors.

As mentioned, it was not possible to get more than 112 respondents. The amount is quite interesting as it corresponds to 16,1% of the total, and this is quite a satisfactory rate

¹⁰ The people visiting these events are mostly described as more culturally interested since the content of both these programmes is cultural. It was interesting to gain these responses because perhaps some of them did not register at the Chamber of Commerce or are an employee instead of an owner, furthermore, by asking it via WORM it got more credibility.

of response. Furthermore, the period 2000-2015 seems like a long enough period to conduct a research on. Especially since the focus on the creative industry is a relatively new phenomenon in Rotterdam. The option of sending more e-mails was not real since a substantial number of reminders was sent. Moreover, I got feedback from respondents mentioning they did not want to receive any more e-mail of this kind.

The number of people that qualified to fill in this survey is adequate to get an answer. Therefore, I am confident that this research can give an indication of the reasons of settlement by creative entrepreneurs. It can give an overall idea of which factors are important to creative entrepreneurs.

3. Results

3.1. Data set

To create a working data set, it had to be organized in a way that fit with the variables. Because for some questions the respondent had the option to add some answers some value labels have been added.

Question one has values added based on the variable 'other'. Other occupations next to the optioned ones were added, or merged with an existing variable. The variables added are: 'Visual arts', 'publishing', 'film', 'consultancy' and 'other'. Question two also had the option 'other' and the variables 'research', 'consultancy' and 'other' were added.

With question eight there was also the option to fill in the answer. Because some answers that were filled in were not clear enough or very specific, for example 'all over the world' I have added broader variables. The answers 'yes in Rotterdam' and 'no' are still applicable. However, the variables 'Yes, in Rotterdam and elsewhere in the Netherlands', 'only in the Netherlands', 'Yes, in Rotterdam and internationally' and 'Yes, internationally' were added. Beforehand, I would have liked to make the distinction between inside and outside Europe, however, practically some answers as 'abroad' and 'all over the world' did not give an indication of a specific place.

Question 10 was a multiple-choice question; the respondents could check multiple boxes of pull-factors and fill in one with the box 'other'. In SPSS the outcome came as various variables with a binary code with 0 if the box wasn't ticked, and 1 if the answer was 'yes'. To solve this and see an outcome it was necessary to create an MR set. Here the possible pull-factors were added and it was possible to create a table.

3.2. Descriptives

3.2.1. Employment

From the statistics, it has become evident that most people work in Industrial design/graphic design (see figure 4). Design is by far the profession of most of the contacted respondents with 40 of the 112 respondents which is 35,7%. Architecture and photography are the most common sectors after that with respectively 18,8% and 15,2% (see table 2). One fact that stands out is that a lot of the contacted respondents did not identify with one of the given fields, yet they filled in 'other' with 32 of the 112 respondents in total.

Table 2 Employment

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Public relations	5	4,5	4,5	4,5
	Architecture	21	18,8	18,8	23,2
	Advertising	7	6,3	6,3	29,5
	Industrial design/graphic design	40	35,7	35,7	65,2
	Organisation of fairs and/or congresses	6	5,4	5,4	70,5
	Photography	17	15,2	15,2	85,7
	Visual art	5	4,5	4,5	90,2
	Publishing	1	,9	,9	91,1
	Film	3	2,7	2,7	93,8
	Consultancy	4	3,6	3,6	97,3
	Other	3	2,7	2,7	100,0
	Total	112	100,0	100,0	

As said the box other has been filled in a lot. A reason for this could be because the Chamber of Commerce has a strict classification with the SBI numbers, however, when you classify yourself as a fashion designer then you are still classified under the SBI number 'designer'. Hence, though different professionals are under the source SBI class they recognize themselves under a different label.

Figure 4. Pie Chart Employment

3.2.2. Objective

With this knowledge, it is not very surprising that the objective of the company is by far creating with 75,9% (figure 5). This means that the creative business industry in Rotterdam is truly creative, even though the creative business industry does not necessarily have the objective of creating. For example, an advertising agency uses creativity in the way they get their product to the public, however, they do not design the graphics.

Figure 5 Bar Chart Objective

Another theory we can test by the survey is the existence of a creative hub in Rotterdam. The companies in Rotterdam mostly work together with other companies in Rotterdam (figure 6). This also indicates the existence of a cluster; which is a place where companies work together. Clusters are important due to the concentration of knowledge

and talent, which can lead to an economic advantage for Rotterdam and the companies (Florida, 2002; Simmie, 2004).

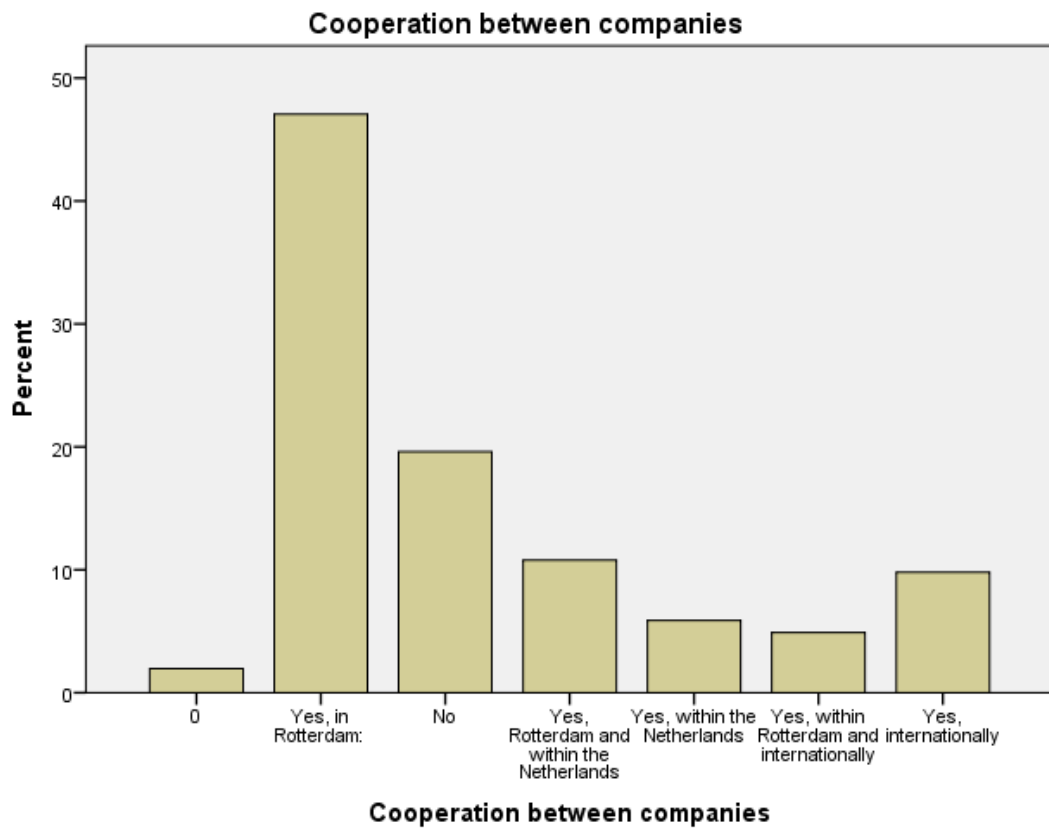

Figure 6 Cooperation between companies

		Cooperation between companies							
		0	Yes, in Rotterdam:	No	Yes, Rotterdam and within the Netherlands	Yes, within the Netherlands	Yes, within Rotterdam and internationally	Yes, internationally	Total
Employment	Public relations	0	3	1	0	0	1	0	5
	Architecture	0	8	4	4	0	0	2	18
	Advertising	0	1	2	1	0	1	1	6
	Industrial design/graphic design	1	17	5	4	3	2	4	36
	Organisation of fairs and/or congresses	0	3	1	0	0	1	0	5
	Photography	0	9	7	0	0	0	1	17
	Visual art	1	4	0	0	0	0	0	5
	Publishing	0	0	0	0	0	0	1	1
	Film	0	0	0	1	2	0	0	3
	Consultancy	0	1	0	1	1	0	1	4
	Other	0	2	0	0	0	0	0	2
Total		2	48	20	11	6	5	10	102

Table 3 Crosstab cooperation between companies

The creative entrepreneurs do work together with others nationally and internationally, as you can see in the table 3, a few (20) do not work with other companies.

Mostly there is the case of a design hub with 17 people working in Rotterdam together. It also seems that designers are the professionals who work the most outside of the Netherlands.

3.2.3. Employment-status

A lot of respondents are self-employed 84,8% as you can see in figure 7. This could mean that most of the respondents are entrepreneurs. This was also the objective of the thesis, to see what attract entrepreneurs. Not all companies are possibly substantially big that they can work internationally or nationally with other companies. However, entrepreneurs that do work together seem to be preferring working within the city.

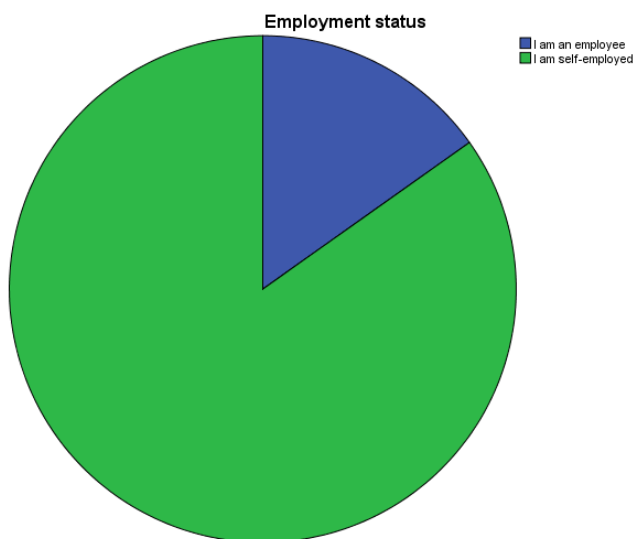

Figure 7 Employment status

3.2.4. Based in Rotterdam

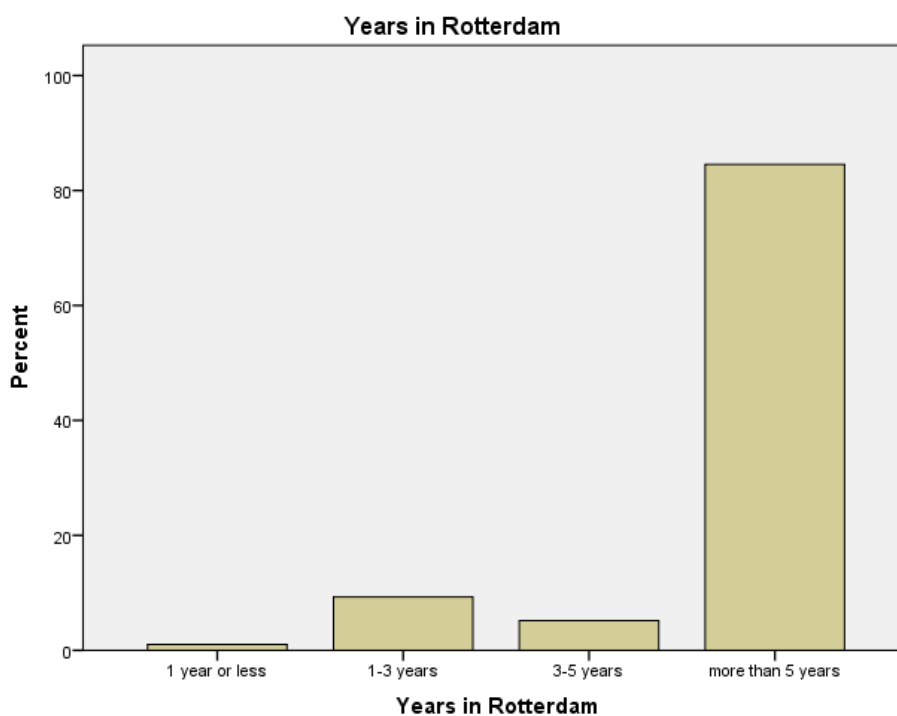

All the respondents that were contacted have their company in Rotterdam or the company they work for is in Rotterdam. Furthermore, most of the respondents – 103 of the 112 – live in Rotterdam (see table 4).

Table 4 Living situation

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Yes	103	89,6	92,0	92,0
	No	9	7,8	8,0	100,0
	Total	112	97,4	100,0	
Missing	System	3	2,6		
Total		115	100,0		

Interesting to see is that most of the respondents have been living in Rotterdam for quite some time, 84,5% have been living in Rotterdam for more than five years (see figure 8). It seems that people do not come to Rotterdam per se to start a company, but most have been living in the city for some time. However, this result may be due to the fact that the sample chosen has been over a period of 15 years, thus it might be quite logically that there are a lot of people that have been living here for a long time.

Figure 8 Years living in Rotterdam

3.2.5. Pull-factors

Results from a multiple response analysis gives the following table:

Table 5 Results Pull-factors

	N	PERCENT	PERCENT OF CASES
CULTURAL DIVERSITY	45	14,7%	44,6%
THE AUTHENTICITY OF ROTTERDAM	43	14,1%	42,6%
OTHER...	39	12,7%	38,6%
AFFORDABLE RENTS	34	11,1%	33,7%
LIVELINESS IN THE CITY (FESTIVALS, EVENTS ETC.)	28	9,2%	27,7%
DIVERSITY OF INHABITANTS	25	8,2%	24,8%
THE AESTHETIC ASPECT OF ROTTERDAM	21	6,9%	20,8%
TOLERANCE IN THE CITY FOR DIFFERENT BELIEVES/GROUPS	16	5,2%	15,8%
THE PRESENCE OF THE ERASMUS UNIVERSITY, WILLEM DE KOONING AND OTHER HIGHER EDUATION IN THE CITY	14	4,6%	13,9%
THE PRESENCE OF NEW BUILDINGS	12	3,9%	11,9%
THE PRESENCE OF BARS, RESTAURANTS AND CLUBS	10	3,3%	9,9%
THE PRESENCE OF OLD BUILDNGS, HERITAGE AND HISTORY	8	2,6%	7,9%
THE AMOUNT OF TECHNOLOGICAL COMPANIES IN THE CITY	7	2,3%	6,9%
THE SAFE ENVIRONMENT	4	1,3%	4,0%
TOTAL	306	100,0%	303,0%

Table 5 shows what the most chosen pull-factors are. However, a lot of people have chosen 'other', this is why the filled in other were put into new categories: 'already living here', 'because of a relation', 'business opportunity', 'location', and 'other'. With 'location' it is meant the location in relation to accessibility.

Table 6 Pull-factors expanded.

	N	PERCENT	PERCENT OF CASES
CULTURAL DIVERSITY	45	15,4%	48,4%
THE AUTHENTICITY OF ROTTERDAM	43	14,7%	46,2%
AFFORDABLE RENTS	34	11,6%	36,6%
LIVELINESS OF THE CITY(FESTIVALS, EVENTS ETC.)	28	9,6%	30,1%
DIVERSITY OF INHABITANTS	25	8,5%	26,9%
THE AESTHETIC ASPECT OF ROTTERDAM	21	7,2%	22,6%
ALREADY LIVING HERE	18	6,1%	19,4%
TOLERANCE IN THE CITY FOR DIFFERENT BELIEVES/GROUPS	16	5,5%	17,2%
THE PRESENCE OF ERASMUS UNIVERISTY, WILLEM DE KOONING AND OTHER HIGHER EDUCATION IN THE CITY	14	4,8%	15,1%
THE PRESENCE OF NEW BUIDINGS	12	4,1%	12,9%
THE PRESENCE OF BARS, RESTAURANTS AND CLUBS	10	3,4%	10,8%
THE PRESENCE OF OLD BUILDINGS, HERITAGE AND HISTORY	8	2,7%	8,6%
THE AMOUNT OF TECHNOLOGICAL COMPANIES IN THE CITY	7	2,4%	7,5%
BUSINESS OPPORTUNITY	5	1,7%	5,4%
THE SAFE ENVIRONMENT	4	1,4%	4,3%
BECAUSE OF A RELATION	3	1,0%	3,2%
TOTAL	293	100,0%	315,1%

Here in table 6 we clearly see that the authenticity of Rotterdam is very important with 43 respondents of the in total 293 filled in answers. Another significant pull-factor is the cultural diversity in Rotterdam with 45 respondents. Also, the diversity of inhabitants (8,5%) and the aesthetic aspect of Rotterdam (7,2%) are quite important. Interesting is that the affordable rents also take in a high place with 11,6% and the liveliness of the city with 9,6%. So, looking at the results, according to the respondents there are multiple pull-factors that are important for settling in Rotterdam. The safe environment seems to be the least important with only 4 people choosing this factor.

One quite interesting thing we can see in the pull-factors is that the creative respondents – which are the one that create as main objective – prefer the authenticity of Rotterdam (39) and the cultural diversity (38), which you can see in table 7 and 8 The authenticity is one that is most important with the creating entrepreneurs, they prefer the ‘vibe’ of the city, which confirms my hypothesis.

Table 7 The authenticity of Rotterdam Crosstabulation.

	Research	0	1	1
	Consulting	3	0	3
	Other	2	0	2
Total		67	45	112

To get a good insight of the factors that are pulling creatives to the city here a small oversight of the factors, and which scholars have mentioned them:

- Tolerance in the city (Florida, 2002)
- Diversity of inhabitants (Florida, 2002; Van Dalm, 2005)
- The presence of the Erasmus, Willem de Kooning and other schools in the city (Florida, 2002)
- The amount of technological companies in the city (Florida, 2002)
- The safe environment (Grodach, 2014)
- The authenticity of Rotterdam (Florida 2002; Van Dalm, 2005; Marlet & Van Woerden, 2005)
- The presence of old buildings, heritage and history (Florida 2002; Van Dalm, 2005; Marlet & Van Woerden, 2005; Bille 2010)

- The presence of new buildings (Florida 2002; Van Dalm, 2005; Marlet & Van Woerden, 2005)
- The mix between old buildings (Pratt, 2008; Bille, 2010)
- New buildings (Van Dalm, 2005)
- The aesthetic aspect of Rotterdam (Scott, 2011; Smit, 2011; Grodach et al., 2014)
- Affordable rents (Florida 2002;, Grodach et al, 2014; Van Dalm, 2005)
- The presence of bars, restaurants and clubs (Clark,2002; Wenting et al., 2004; Marlet & Van Woerden, 2005)
- Cultural diversity (Montgomery, 2010)
- Liveliness in the city (Jacobs, 1961; Bille, 2010)

It is interesting to see, that Montgomery (2010) is the only scholar that deems cultural diversity as an important factor whereas this research has shown that this is the number one pull-factor in Rotterdam. Montgomery (2010) has also stated that that the experiencing of cultural diversity is build bottom up for the inhabitant. As mentioned before, the creative class prefers to spend their leisure time cultural or creative, this might be one reason why this factor is high in the list. The cultural diversity and the liveliness of the city have been boosted by the city marketing by allowing and organizing a lot of festivals to happen in the city with different themes (Rotterdam Partners, n.d.). The number of events that are allowed to take place can change the image of the city, look for example at the amount of festivals that have emerged the last couple of years. However, that is more the liveliness of the city. The cultural diversity is more about the presence of the cultural sector. This indicates that this is important for the creative class, and perhaps could urge the municipality to stimulate this more.

The above factors are easier to measure than the number two pull-factor authenticity. This is less tangible and it is a bottom-up build experience. Since authenticity is a factor that is chosen a lot, it seems that there is little case of negative gentrification with the loss of authenticity. Authenticity is a feeling that is partly built by city marketing, and the survey confirmed the theories about that by Florida (2002), Van Dalm (2005) and Marlet & Van Woerden (2005). Rotterdam is a different city than it was a few years ago, and it also has changed its image; the motto of the city is now: *Rotterdam. Make it happen* (Rotterdam Partners, n.d.). This is a result from city marketing with a collaboration between Rotterdam

Partners and the Port of Rotterdam, the Erasmus University Rotterdam, the City of Rotterdam, Rotterdam Topsport, Rotterdam Festivals. This marketing strategy between different parties had as the objective to show different stories from Rotterdam, from small entrepreneurs to bigger organisations. (idem). This technique is based on bottom-up experience, it shows that 'regular' inhabitant can 'make it happen'. This is also emphasizing the individuality of the people and the chances that lie in the city. As Pratt (2008) has stated, the creative city is *cool*, and it seems that the image of the city has changed of the years due to and people feel that as well.

The theory of the Three T's (Florida, 2002) has been critically commented throughout the years, however we see in the results that it still is substantially important because we can see in the table that the Tolerance and presence of schools have respectively 5,5% and 4,8%. Yet, technological companies are only chosen 2,4% of the cases, however, Rotterdam is not famous for its technology so it was to be expected that this factor was not as important as others. I do suspect that the tolerance, and with that the multiculturalism is very important in Rotterdam, which is why the diversity of inhabitants is high in the ranking. The different people living in Rotterdam is what makes it a unique city, with a lot of authenticity due to the mix of inhabitants.

One thing that Rotterdam is known for is the modern architecture, it's the first Dutch city with a skyline. The aesthetic factor and the presence of new buildings have been widely covered by the media (Murier and Schmitt, 2017; Kopf, 2016; L'architecture du quotidien, 2014). The results show that the aesthetic aspect overall is good for 7,2% which makes it a substantially important pull-factor. The number of articles written also shows us that the architecture is a key element in the image of Rotterdam, it is emphasized a lot in various media.

Furthermore it is interesting to see that entrepreneurs deem architecture important, perhaps a reason is that as Smit (2011) has researched, business opportunity is linked with the visual quality of an area. Aesthetics can boost creative thinking, and make it more attractive for potential clientele to do business with a company (Smit, 2011). The idea of visual quality and business opportunity may also lie in the fact that there is a lot of room to add in Rotterdam since there is also a lot of vacancy. There are many places that have space for opportunity of to build, which might be appealing to creatives (Van Dalme, 2005). The research by Dienst Kunst & Cultuur in 2010 had as a conclusion that the city was

unattractive, it seems that this has changed over the years since aesthetics make up for 7,2% of the total.

The survey showed that not only the vibe and look is important for the creative entrepreneur, also the economic aspects are crucial. The affordable rents as mentioned by Florida (2002), Grodach et al (2014) and Van Dalm (2005) make up for 11,6% of the total. These are factors that are controlled by the municipality. However, interestingly enough the prices aren't that low at all, yet it seems that the creative class is content with it.

In conclusion, the survey shows that cultural diversity and all its aspects, and the authenticity factors are very important. The diversity of inhabitants and the aesthetic aspects are also pull-factors that should not be overlooked with Rotterdam as the case-study.

4. Conclusion

To attract people is an important objective for policymaking, also in Rotterdam. According to the media Rotterdam is *booming*, which might be part of the new image that Rotterdam wants to express. However, Rotterdam does not want to attract just 'normal' people, it wants to be attractive for a specific group of people: the creative class.

But why is it so important to attract creatives? Creativity sits at the basis of innovation, and innovation is the key to entrepreneurship. This is vital to be successful in this globalizing world where ideas are ubiquitous, entrepreneurship sees the gap of what is needed. This is good for the economic prosperity; good business ideas can lead to successful companies and job opportunity. Creativity, innovation and entrepreneurship come together in the creative industry. The creative industry has been a prime focus of the Rotterdam government since 2006. The amount of jobs in the creative jobs grew overall in the Netherlands, this can indicate that there is more demand for creative services and products. The Dutch governments divides the creative industry in three sectors: arts, media and publishing, and the creative business services. The business sector is the sector that does not necessarily create creative content, but uses creativity. An example of this branch is marketing; they use creativity to come to their product or service. The creative business sector is very innovative because creative ideas form the basis of their works.

When creativity thrives and creatives live in a city you have created a creative city. The city and its inhabitants have changed; they are more consumer based and individualistic. At the basis of creativity, creative city and the creative industry is the creative class. The creative class has specific needs and with that an influence on how the city is governed, since they want to attract the creative individuals. Creatives are individualistic, leisure time is important, and they are more interested in arts and aesthetics.

As said, creativity is desired to keep up with the competition around the world and with that to thrive in the economy. The creative class is thought to be the solution to the threat that can keep up with the technological challenging world where Rotterdam is placed in. The creative class is an important pull-factor for companies to settle in a city, they need talented staff. Furthermore, creatives are thought to have a higher income to spend, which is naturally good for the local economy.

The importance of creativity and the creative class has been established. To attract the creative class certain pull-factors are interesting. The municipality can stimulate some factors, and city marketing can get these pull-factors under the attention. The Marketing is focused on the creation of a buzz, variety, on the local art scene, amenities, public spaces, universities and on events. However, this influence on the image of the city and what kind of people should live there or is not always in the benefit of the people that are already living there. The changing of the city can be in the form of positive and negative gentrification. When the policy is too much focused on attracting creatives, it can have a negative impact in the sense that it can higher rent for example or the constructing of a place can be negative for the authenticity.

My hypothesis is mostly focused on the non-municipal factors, and more on what people experience by bottom-up experience or marketing. I think the feeling of Rotterdam is important, which I see in authenticity. Authenticity is a factor that is mentioned in the literature by various scholars, and it seems that they are correct (Florida, 2002; Van Dalm, 2005; Marlet&Van Woerden, 2005). Authenticity is chosen in 14,7% of the responses to the survey I created. However, surprisingly cultural diversity in the sense of the presence of museums, galleries and more is the most important factor with 15,4%. This factor is only mentioned by Montgomery (2010) and not by other scholars that I have encountered. However, it is thought that the creative class has more leisure time and has more interest in art. This makes it plausible that the creative class prefers to spend time in cultural institutions or events. Interesting is that the authenticity factors, the *vibe*, is important, which can be accomplished by the changing image of Rotterdam. The diversity is another important pull-factor, in which I see also authenticity. My hypothesis which was firstly mostly based on a personal idea has proven to be correct in this case.

Municipal factor like the presence of cultural institutions is important and the liveliness of the city. Furthermore, affordable rents are a substantial factor with 11,6%, which has been mentioned by various scholars (Florida, 2002; Grodach et. Al, 2010; Van Dalm, 2005). Remarkable, since the rent has been at a high point, but it seems that people don't notice it or that they still find the prices reasonable. It seems that every type of factor is important: an economical one, a cultural one and a less tangible one like the feeling. However, it does seem that cultural diversity is the most attracting factor the city with the presence of cultural institutions. We could say that the image of Rotterdam is working, the

inhabitants take over the aspects that the municipality wants the city to have like the authenticity and a blooming and booming cultural sector.

The pull-factor 'because of a relation' and 'business opportunities' have been chosen least important, which is surprising in the case of the latter because it does seem that a lot of companies work together. It does seem that Rotterdam has become a cluster of creative companies, yet this is not an important reason to settle here according to the results of the survey. Furthermore, in the creative business sector the designers are the most present, which can be partly interpreted from the fact that 'designing' is a very broad.

As said, this research cannot fully function as a representation of the reality. Yet, this research can give an interesting insight in the pull-factors that are important for creative entrepreneurs since a substantial amount of the total was reached. It does seem that the factors mentioned in the literature did partly predict what kind of factors are important for the creative entrepreneurs, the results of the research showed us to what extent.

For future research, it would be interesting to see if these factors are interesting as well for the other sectors besides the creative business services. Also, when doing a qualitative research, it would be intriguing to find out how the respondents experience the factors. For example, in what do they see authenticity in Rotterdam, and what do they consider liveliness? Furthermore, the image of Rotterdam is interesting to submerge to further research. Because do these factors really have an influence on the image? And does the marketing around the image have had an influence on the decision to settle here, or was it something else entirely?

This research, despite its deficiencies, can be interesting for policy makers. It shows what factors are important to develop, and which are important to sustain. It can give an indication on how to change the image of Rotterdam even further, because even if Rotterdam wants to be a creative city it is still a little city with a not so large cultural scene. It seems that factors of various character are important to settle in Rotterdam; economic factors, the *vibe* and cultural diversity. This means that policy can get you a long way, but cannot do all. Naturally, marketing is also influenced by what the municipality wants, but it is not as easy as for example building more bars or to create a fruitful environment for businesses. The *vibe* is built bottom-up. To attract creative entrepreneurs, you must create and emphasize pull-factors with the best of both worlds.

6. Appendices

Appendix A: Survey

Q1 1. In what creative field is your current employment?

- Public relations (1)
- Architectural agency (2)
- Advertising agency (3)
- Trade advertising space (4)
- Industrial design/graphic design (5)
- Organisation of fairs and/or congresses (6)
- Photography (7)
- Other: (8) _____

Q2 2. What is the main objective of the company you work in?

- Creating (1)
- Producing (2)
- Distributing (3)
- Promoting (4)
- Other: (5) _____

Q3 3. What statement is applicable on your current situation:

- I am an employee (1)
- I am self-employed (2)

Q4 4. Do you live in Rotterdam at the moment?

- Yes (1)
- No (2)

Display This Question:

If 4. Do you live in Rotterdam at the moment? Yes Is Selected

Q5 5. How long have you been living in Rotterdam?

- 1 year or less (1)
- 1-3 years (2)
- 3-5 years (3)
- more than 5 years (4)

Q7 6. Is the company you work in, based in Rotterdam?

- Yes (1)
- No, it's based in (2) _____

Q8 7. Does the company you work for also work with other companies in Rotterdam, or elsewhere?

- Elsewhere, namely: (1) _____
- Yes, in Rotterdam (2)
- No (3)

Q10 Please answer the following question by choosing a maximum of three.8. What has been an important factor/important factors for choosing to settle the company in Rotterdam?

- Tolerance in the city for different believes/groups (1)

- The safe environment (5)
- The authenticity of Rotterdam (6)
- The presence of old buildings, heritage and history (7)
- The presence of new buildings (8)
- The aesthetic aspect of Rotterdam (9)
- Affordable rents (10)
- The presence of bars, restaurants and clubs (11)
- Cultural diversity (various museums, galleries etc.) (12)
- Liveliness in the city (Festivals, events etc.) (13)
- Other... (14) _____

Appendix B: e-mail

Dear sir/madam,

I would like to ask your help with graduating for my master thesis of Cultural Economics and Entrepreneurship at the Erasmus University Rotterdam by filling in a small survey of only 8 questions.

The research I am conducting focuses on creative companies in Rotterdam and their choice of settlement. With this survey I would like to figure out why a company chooses to settle themselves in Rotterdam and I would be extremely thankful if you would help me out, the survey won't last any longer than five minutes.

Thank you in advance.

Sincerely,

Julia den Outer

	Visual art	5	4,3	4,5	90,2
	Publishing	1	,9	,9	91,1
	Film	3	2,6	2,7	93,8
	Consultancy	4	3,5	3,6	97,3
	Other	3	2,6	2,7	100,0
	Total		112	97,4	100,0
Missing	System	3	2,6		
Total		115	100,0		

Table 10 Frequency Main objective

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Creating	85	73,9	75,9	75,9
	Producing	12	10,4	10,7	86,6
	Distributing	4	3,5	3,6	90,2
	Promoting	5	4,3	4,5	94,6
	Research	1	,9	,9	95,5
	Consulting	3	2,6	2,7	98,2
	Other	2	1,7	1,8	100,0
	Total	112	97,4	100,0	
Missing	System	3	2,6		
Total		115	100,0		

Table 11 Frequency employment status

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	I am an employee	17	14,8	15,2	15,2
	I am self-employed	95	82,6	84,8	100,0
	Total	112	97,4	100,0	
Missing	System	3	2,6		
Total		115	100,0		

Table 12 Living in Rotterdam

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Yes	103	89,6	92,0	92,0
	No	9	7,8	8,0	100,0
	Total	112	97,4	100,0	
Missing	System	3	2,6		
Total		115	100,0		

Table 13 Frequency years living in Rotterdam

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	1 year or less	1	,9	1,0	1,0
	1-3 years	9	7,8	9,3	10,3
	3-5 years	5	4,3	5,2	15,5
	more than 5 years	82	71,3	84,5	100,0
	Total	97	84,3	100,0	
Missing	System	18	15,7		
Total		115	100,0		

Table 14 Frequency companies in Rotterdam

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Yes	102	88,7	100,0	100,0
Missing	System	13	11,3		
Total		115	100,0		

Table 15 Frequency of cooperation between companies

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	0	2	1,7	2,0	2,0
	Yes, in Rotterdam:	48	41,7	47,1	49,0
	No	20	17,4	19,6	68,6
	Yes, Rotterdam and within the Netherlands	11	9,6	10,8	79,4
	Yes, within the Netherlands	6	5,2	5,9	85,3
	Yes, within Rotterdam and internationally	5	4,3	4,9	90,2
	Yes, internationally	10	8,7	9,8	100,0
	Total	102	88,7	100,0	
	Missing	System	13	11,3	
Total		115	100,0		

Table 16 Pull_factors Frequencies

		Responses		Percent of
		N	Percent	Cases
pull_factors ^a	The presence of bars, restaurants and clubs	10	3,3%	10,1%
	Cultural diversity (various museums, galleries etc.)	45	14,8%	45,5%
	Liveliness in the city (Festivals, events etc.)	28	9,2%	28,3%
	Tolerance in the city for different believes/groups	16	5,2%	16,2%
	Diversity of inhabitants	25	8,2%	25,3%
	The presence of the Erasmus University, Willem de Kooning and other higher education in the city	14	4,6%	14,1%
	The amount of technological companies in the city	7	2,3%	7,1%
	The safe environment	4	1,3%	4,0%
	The authenticity of Rotterdam	43	14,1%	43,4%
	The presence of old buildings, heritage and history	8	2,6%	8,1%
	The presence of new buildings	12	3,9%	12,1%
	The aesthetic aspect of Rotterdam	21	6,9%	21,2%
	Affordable rents	34	11,1%	34,3%
	Already living here	18	5,9%	18,2%
	Because of a relation	3	1,0%	3,0%
	Business opportunity	5	1,6%	5,1%
	Location	8	2,6%	8,1%
	Other	4	1,3%	4,0%
Total		305	100,0%	308,1%
